

New Product Information

Not Quite Satisfied with Your Sealing Options?

Each production agriculture operation varies in terms of field and soil conditions, and different types of sealers are required to meet the unique needs of each grower. Yetter Manufacturing Company offers a wide assortment of sealing options and is proud to introduce the latest in sealing innovations: the Max Sealer Plus™.

Growers overwhelmingly choose disc sealers as their preferred sealing option, and the features of the Max Sealer Plus™ make it a strong choice when looking for a sealer. The Max Sealer Plus's™ arms operate independently, which facilitates outstanding residue flow and continuous contact with the soil. The large vertical blade breaks up heavy residue and powers through obstructions without springs. The blade pitch can easily be adjusted to your soil conditions for precise, accurate sealing. This sealer's flat face hub also guarantees smooth residue and soil flow.

The Max Sealer Plus™ has various blade options from which to choose, including 18" smooth, notched, 13 shallow wave, and 8 wave blades so that growers can select the one best suited for their operation. In addition, the Max Sealer Plus™ works well in conjunction with Yetter Manufacturing Company's exclusive *Shark Tooth™ Wheels.

The Max Plus Sealer™ is incredibly versatile and can be used in conjunction with a wide variety of shanks. The sealer will bolt onto the following: 1" x 2" flat shank, 1.25" square coil shank, 2" x 1.25", 2" shank, 1.25" x 2" flat shank, Yetter 1.25" square
